natural resource managers*

BIOLOGY AND CONSERVATION OF
MARTENS, SABLES, AND FISHERS

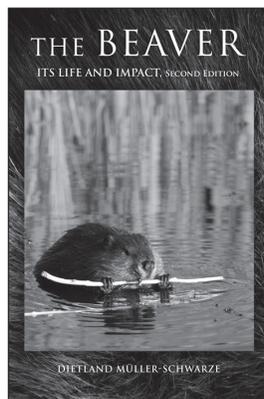

A New Synthesis

EDITED BY KEITH B. AUBRY, WILLIAM J. ZIELINSKI,
MARTIN G. RAPHAEL, GILBERT PROULX, AND
STEVEN W. BUSKIRK

Mammals in the genus *Martes* are mid-sized carnivores of great importance to forest ecosystems. This book, the successor to *Martens, Sables, and Fishers: Biology and Conservation*, provides a scientific basis for management and conservation efforts designed to maintain or enhance the populations and habitats of *Martes* species throughout the world. The twenty synthesis chapters contained in this book bring together the perspectives and expertise of sixty-three scientists from twelve countries, and are organized by the five key themes of evolution and biogeography, population biology and management, habitat ecology and management, research techniques, and conservation.

Second Edition
THE BEAVER
Its Life and Impact
DIETLAND MÜLLER-SCHWARZE
"This book takes a comprehensive look at the behavior, natural history, and ecology of the North American and Eurasian species of beaver. For wild animal population managers, zoologists, and naturalists, this book presents practical advice regarding beaver management and shows how the species can be an important ally in the restoration efforts of the wetlands."

An intriguing book that many will enjoy reading."

Second Edition
**THE NORTH AMERICAN
PORCUPINE**
ULDIS ROZE

"Engaging and interesting. The reader will learn much about this fascinating mammal that is frequent in our woods but often unseen by the untrained observer."
—WILDLIFE ACTIVIST

Uldis Roze's firsthand observations are a revelation; throughout the second edition of his classic work

on the subject, he shows how much can be learned by "following a porcupine in the woods." Roze's comprehensive knowledge of this important mammal will interest wildlife managers in addition to a wide audience of natural history readers.
